

Targeted nurse calls with DAKSeco

Nurse call system without DAKS

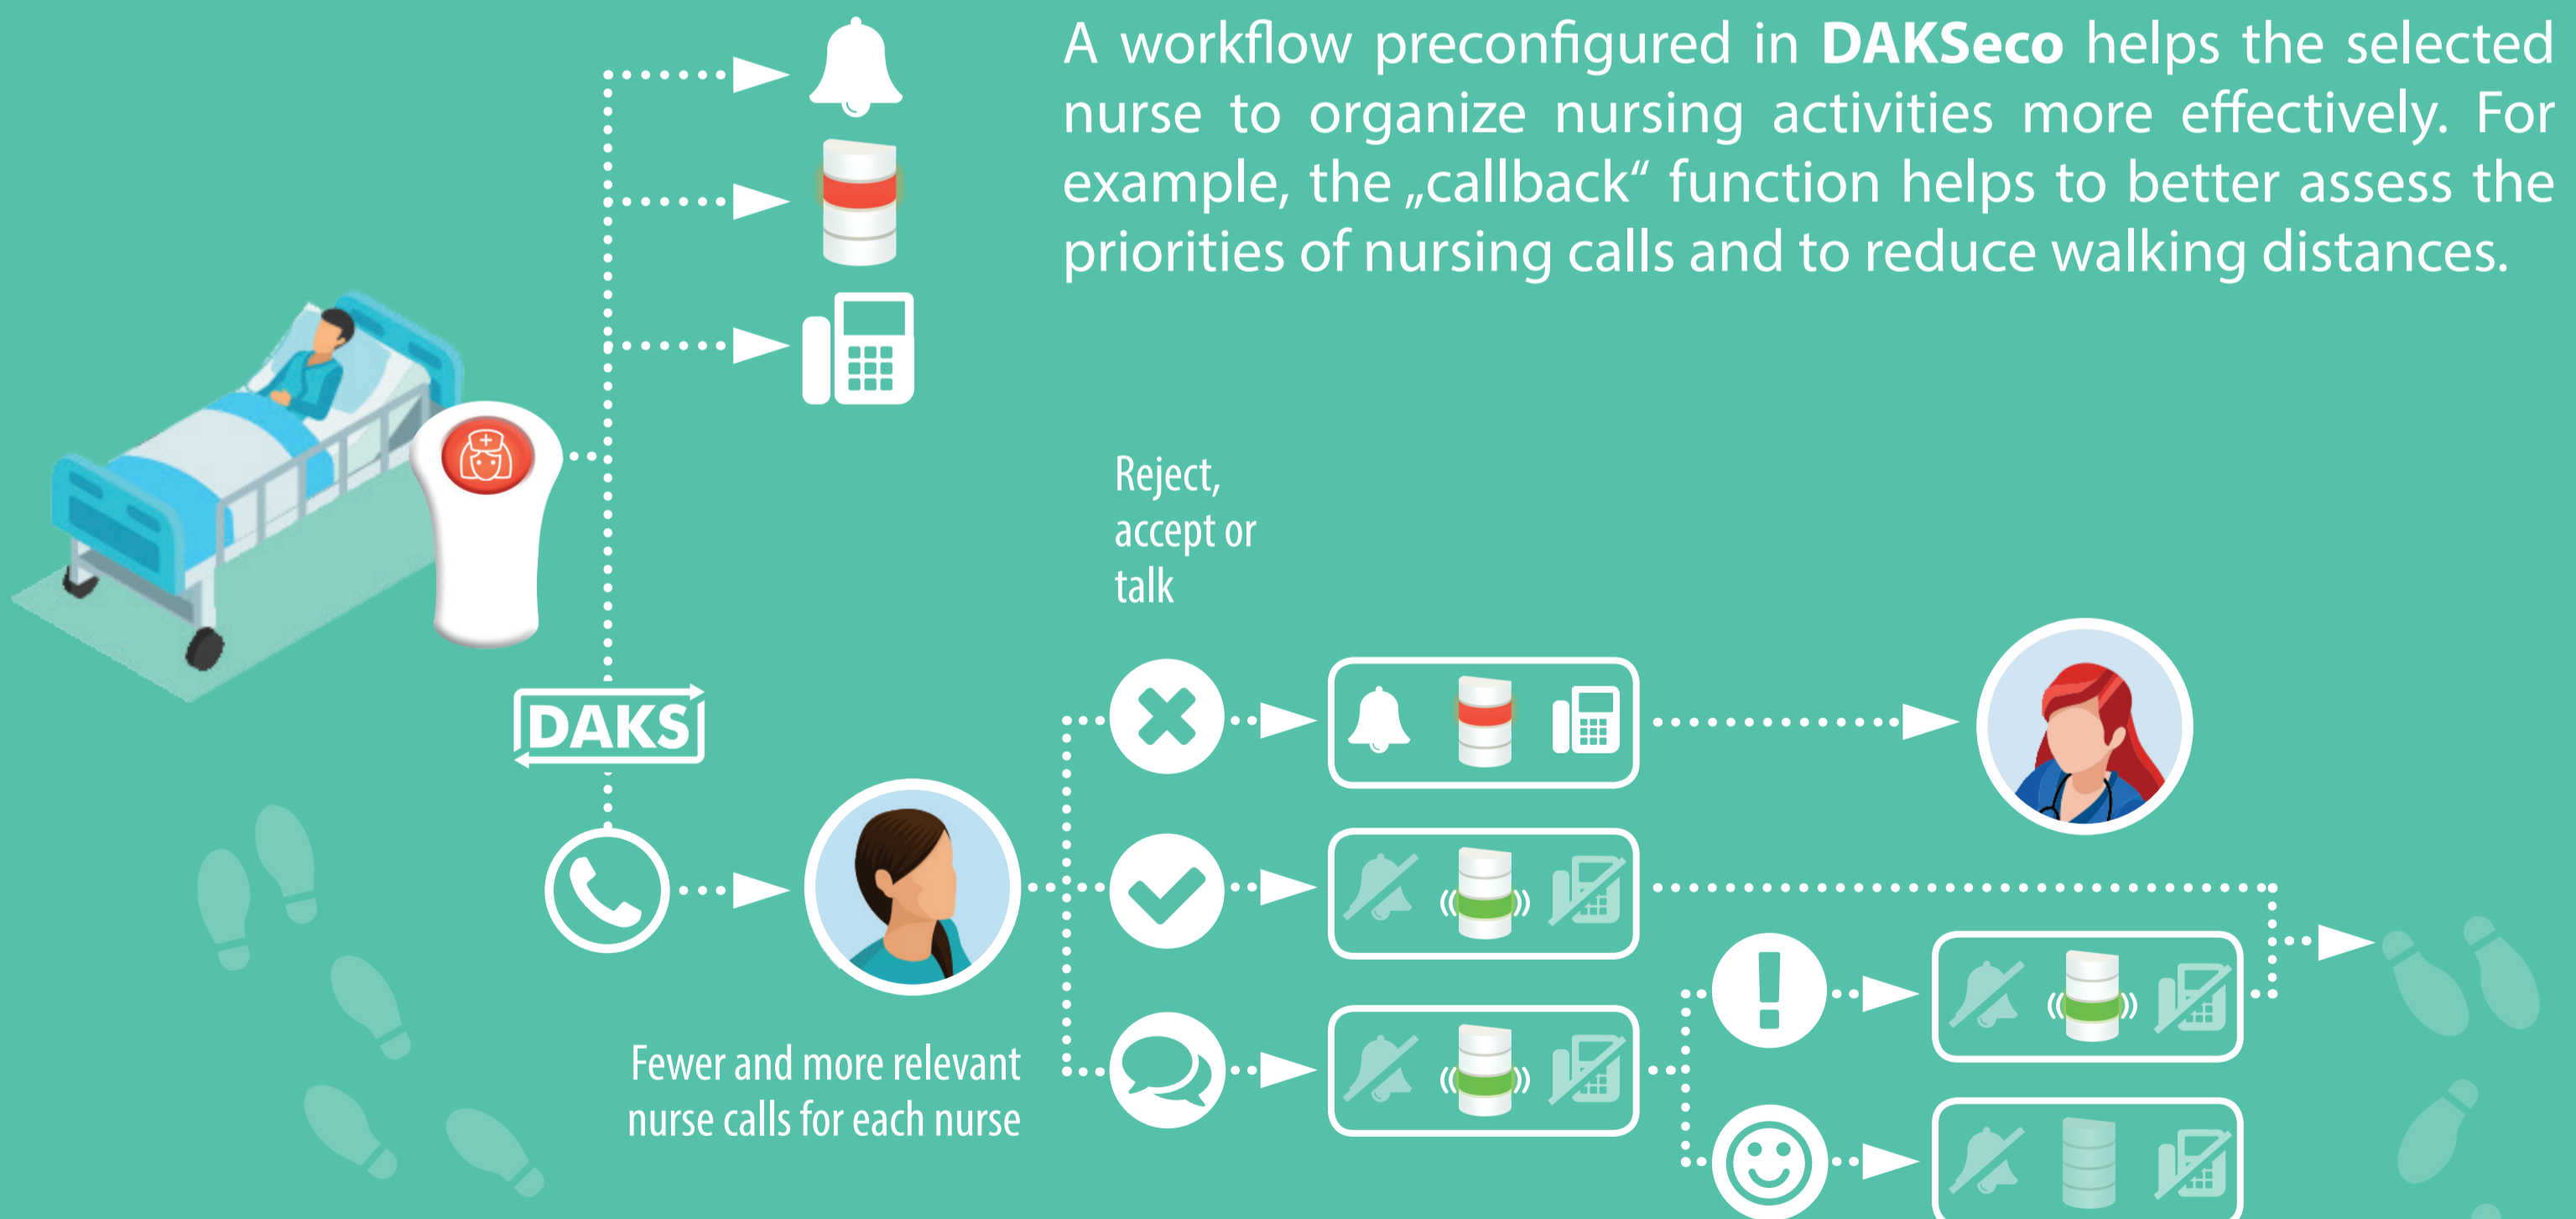

Traditional nurse calls are issued unidirectionally to all nurses via signal tone, corridor display and central displays, interrupting their work process. This results in many unnecessary routes.

Nurse call system with DAKS

DAKSeco directs the nurse call to the telephone of the responsible nurse. This reduces the total number of calls for the individual nurse as well as the number of interruptions.

Nurse Call Systems with DAKSeco

Fewer and more relevant nurse calls for each nurse
