

DAKS-Pro Add-on

DAKS Customized Operator

Tailor-made user interfaces to best answer to complex alarm scenarios

In an emergency situation you need to competently master an array of different tasks and alert many different target individuals within a minimum of time and under tremendous pressure.

To prevent possible stress-induced errors with harmful consequences, it is essential that in these situations key processes are triggered in a highly intuitive, straightforward and genuinely efficient way.

With DAKS Customized Operator (DCO), you can tailor user interfaces to your specific needs and also fully visualize and simulate your alarm processes.

Through the graphical alarm and alerting processes your staff is enabled to set off vital alarm processes intuitively, correctly and confidently at any second.

Easier emergency workflows

Visualize to fully grasp your alarm scenarios

Design and tailor user interfaces to your requirements

More safety in alarm situations

Warrant correct and intuitive decision-making under stress

Be better prepared through well-practiced and tested workflows

Use DCO to act quickly and effectively

Design tailored alarm scenarios

- Simulate your own design concepts and communicate them to all responders in an ostensive way.
- Apply the DCO-Designer to visually realize even the most complex scenarios just as easily.
- Run simulations in advance to be optimally prepared for unexpected alarm scenarios.

React intuitively and instinctively in emergencies

- Bring together and administrate different source information in a clear and structured way.
- Instinctively grasp even large-scale alerting processes and odd location details through site plans and maps, identify priorities swiftly and decide accurately and with confidence.
- Trigger all necessary processes with a few clicks or through your touchscreen.

Adjust & customize your individual alarm processes

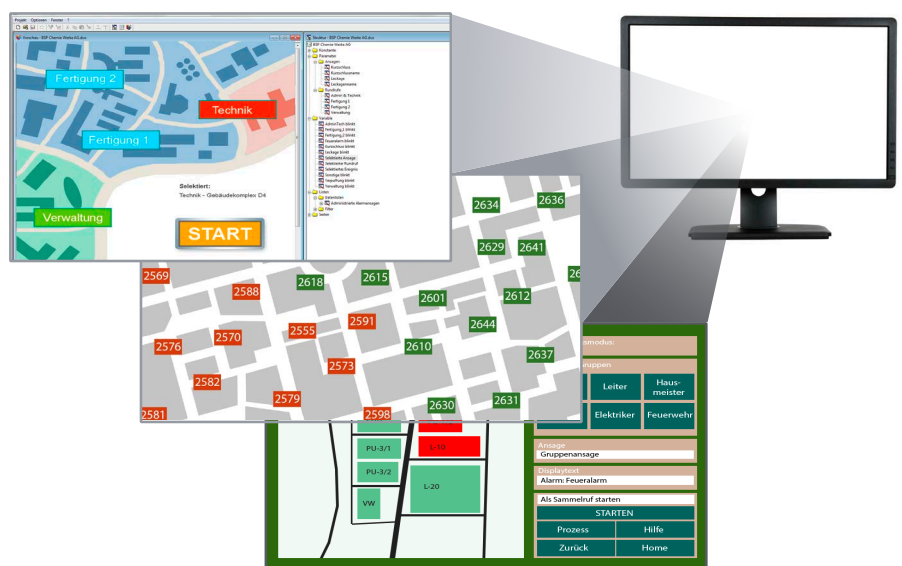

- Respond quickly and flexibly to changed conditions.
- Arrange and visualize new alternatives easily and user-friendly.
- Design individual thematic and subject plans to realize individual scenarios.
- Map out specialist and industry-specific processes.

Design your own user interfaces

...including static controls, edit fields, checkboxes, site plans and plant maps, buttons and many other features.
