

DAKS-Pro Application Module

Personal Security

Provide safety for everybody working in a hazardous environment

In certain areas, employees working alone at lone workstations are exposed to potential threats.

It is therefore of paramount importance that all employees at lone workplaces are able to call for the right help at any moment in time and whenever needed – even when they themselves are no longer able to set off that alarm call.

The Personal Security application of DAKS-Pro monitors and protects exposed employees in dangerous situations and raises targeted and reliable alarms when they are in distress.

Both mobile and stationary users are monitored by the system, either by verifying their radio link on a cyclical basis or by making defined monitoring calls, but the users can also set off deliberate and automatic alarms autonomously by themselves.

Bring more safety and faster help and relief to your lone workers and employees

Protect caregivers, e. g. on their lone night shifts

Protect service personnel at lone workstations in high-risk work areas

Protect watchmen on their routine rounds

Ensure reachability of important persons and responders

DAKS protects people and activates all necessary processes for...

Intentional alarms

- Via speed-dial / hotkey from any communication device
- Via intuitive alarm button on the pertinent communication devices, e. g. OpenStage M3 Plus devices
- Via the alarm button of the app if you are operating with smartphones that are equipped with DAKS-Mobile-Client

Automatic alarms

Through sensors, such as man-down and no-more sensors of the pertinent communications devices, e. g. OpenStage M3 Plus devices

Product Details

☑ General performance features

- Activation and deactivation of the monitoring process by the users themselves, by the head of section, or via contact
 - Support of 10 different Personal Security Profiles
 - Monitor up to 10 telephones and up to 100 DAKS-Mobile-Clients at the same time
 - Visualize all active and ongoing Personal Security processes at the Operator-Tool
 - Record the current physical location in form of a voice message (when the system does not operate with positioning function)
 - Empower every monitored person to reset the monitoring cycle time (e. g. when that person is cannot interrupt a particular job and is therefore unable to take any calls for a while)
- Launch selective Broadcasts automatically (where needed with the latest location details) if there is no answer, a radio link error or any other problem
 - Monitor the radio link in combination with OpenScape 4000 Cordless, OpenStage WL3 and DAKS-Mobile-Clients

☑ Especially powerful in combination with...

- OpenStage M3 Plus
- DAKS-Mobile-Clients: With special logon/logoff, alerting and location tracking/positioning function, and where needed also with the visualization of the obtained positioning results through the Operator-Tool installations
