

Upgrade to DAKS-400 now

Why DAKS-400?

The number of cyber attacks is increasing, security requirements in companies are becoming ever more stringent. It is increasingly important to look to the future and purchase systems that you can rely on, especially in emergencies. DAKS-400 is ideally optimized for current and future security requirements and also excels in many other aspects with its future-oriented, durable architecture.

A particularly favorable time to upgrade

Benefit from cutting-edge hardware technology and request your quote from your dealer today.

Solution with tetronik: "buy-to-own"

While rental models are becoming increasingly popular on the market, tetronik continues to offer a more attractively priced "buy-to-own" model with no additional rental costs per user. Thanks to its long service life (our DAKS server runs maintenance-free for years), the costs of a DAKS server amount to just a few euros per day over its lifetime. In summary, this means for you:

no "upselling" coercion

no hidden costs

no monthly charges

DAKS-400 sets new standards in (cyber) security with its ARM processor, encryption algorithms and separate memory areas.

The current hardware is ...

- ✔ even more efficient
- ✔ even more durable
- ✔ even more sustainable and
- ✔ even more usability-friendly than any previous DAKS hardware.

Unsurpassed hardware quality

Performance

Even more efficient and economical with greater performance

Twice as many voice channels available in parallel

Even more durable

Even more sturdy

Security

More stable data management

Based on the latest arm technology

Secure against hacker attacks and theft

User and security data are stored separately

Usability

With innovative ePaper display

Easily accessible interfaces

Flexible operating options

Sustainability

Designed and produced entirely in Germany
